

Step 1 CSS Assignment

Use CSS to set these properties for the text in your page:

1. Font-family ✓
2. Font-size ✓

Step 2 CSS Assignment

Complete these actions:

Use CSS to set these properties for the form on your page:

1. Width of the inputs ✓
2. Margin between the inputs ✓
3. Border of the inputs ✓
4. Border radius of the inputs ✓
5. Save the file. ✓

Step 3 CSS Assignment

1. Open the “one_page_website.html” file. In the <head> element, link to your external CSS stylesheet (“one_page_website.css”). ✓
2. Save your code and run the “one_page_website.html” file in the browser to ensure everything displays properly. ✓

Step 4 CSS Assignment

1. ✓ For your reference, here are the best practices for accessibility, as covered earlier on this course:
2. ✓ All images and multimedia must have descriptive text alternatives (alt text) for accessibility.
3. ✓ All website functions must be operable via keyboard alone to ensure accessibility for all users.
4. ✓ Text and background colors must have sufficient contrast to be readable by users with visual impairments.
5. ✓ Websites must have consistent and clear navigation structures to help users find information easily.
6. ✓ Form fields and input elements must be clearly labeled for users who rely on screen readers.
7. ✓ Elements that change automatically, like carousels or pop-ups, must include options to be paused or controlled for accessibility.

Note: Not all of the above points necessarily apply to your one-page website.

Wow, this was a pain. I guess you could get use to doing this, but I can see where it could completely change the design.

Step 5 CSS Submission Assignment

This assignment builds on top of the One-Page website you created from an earlier assignment.

Minimum requirements for this submission:

Successfully link your HTML file to your CSS file, and Using your CSS file, modify the following properties:

1. ✓ Font-family
2. ✓ Font-size
3. ✓ Width of the inputs
4. ✓ Margin between the inputs
5. ✓ Border of the inputs
6. ✓ Border radius of the inputs
